Four Operations

Division Using Factors

The factor pairs of 15 are 3 and 5. 4680 ÷ 15 = 4680 ÷ 3 ÷ 5 4680 ÷ 3 = 1560 1560 ÷ 5 = 312 So 4680 ÷ 15 = 312

Primes

A prime number has only 1 and itself as factors: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 33, 37, 41, 43

A composite number has factors other than 1 and itself.

Reason from Known Facts

90 ÷ 10 = 9 so 90 ÷ 20 = 4.5 and 90 ÷ 5 = 18 16 × 9 = 144 so 1.6 × 9 = 14.4 4352 ÷ 17 = 256 so 256 × 18 = 4352 + 256 = 4608

3786 + 2850 = 6636 so 4786 + 2850 = 7636

> and 2786 + 3850 = 6636 and 8636 - 3786 = 4850

Short Division

Start from the left.

Squares and Cubes

Square numbers result from a number being multiplied by itself (e.g. 5 × 5 = 25): 1, 4, 9, 16, 25, 36, 49, 64, 81, 100

Cube numbers result from a number being multiplied by itself twice (2 × 2 × 2 = 8): 1, 8, 27, 64, 125

Mental Calculations and Estimation

Change the order of calculations:

50 × 34 × 2 = 50 × 2 × 34 = 100 × 34 = 3400

Adjust Numbers:

 $\pounds 8.99 + \pounds 3.49 = \pounds 12.48$

Use £9 + £3.50 = £12.50 and subtract 2p

Estimate on a number line:

Divisibility Rules

A number is divisible by:

2 if the ones digit is even

3 if the digit sum is a multiple of 3

4 if the ones digit is even when the number is halved

5 if the ones digit is 0 or 5

- 6 if it is divisible by both 2 and 3
- 10 if the ones digit is 0
